About Me

I'm a student from Politecnico di Milano, currently looking to graduate in September 2024. During these years I consolidated a passion for programming and solving IT problems.

Why Optiver?

I found Optiver in the list of companies in a list that the Associazione Ingegneri Matematici was sharing, and then i found it again in the list of sponsors in the Advent of Code challenge. So I took a peek at the careers section and found this internship. I find financial markets interesting, even though they're not my principal field of study. I look forward to learn better how a big organization works and how code writing is handled.

Why Me?

As I said before, I really like to solve IT problems, to the point that, sometimes, I truly forgot about everything around me until i found a solution. I don't consider myself a great coder as much as I consider myself a great learner. I don't think I'm able to make myself look good on paper, I find myself more comfortable speaking to people.

Sincerely,

Andrea Bonifacio
